## Methodology

Consumer Price Index (CPI) is calculated with a new basket of product from December 2007. Weights are based on the results of the Household budges Survey, carried out during October 2006 – September 2007. December 2007 is considered as the base period (December 2007 = 100). Previous change of the product basket was from January 2002, where the number of the products was increased from 221 to 262 products. In the new basket the number of product is 272. The international classification, COICOP, with 12 main groups was introduced to the previous product basket and it will continue to be used with the new product basket. The index will cover all Albanian (rural and urban) territory. The previous index covered only the urban area. The product weights will be different for each region. Prices are collected in main cities of 11 prefectures were Kukës is within the prefecture of Dibër.

The Consumer Price Index of Albania is a Laspeyres type index:

$$I_{0,i}^{t} = \frac{\sum_{i} P_{i}^{t} * Q_{i}^{0}}{\sum_{i} P_{i}^{0} * Q_{i}^{0}}$$

With weights ( $w = P^*Q$ ) from base period this is approximated to:

$$I_{0,i}^{t} = \sum_{i} w_{i} * \begin{pmatrix} p_{i}^{t} / \\ p_{i}^{0} \end{pmatrix}$$

In more detail, a price relative is calculated for each item and region with geometrical mean on the sample of outlets:

$$PR_{t-1,ij}^{t} = \prod_{k=1}^{n} \left( \frac{P_{ijk}^{t}}{P_{ijk}^{t-1}} \right)^{1/n}$$

Monthly chaining gives the price relative from the base period:

$$PR_{0.ii}^{t} = PR_{0.ii}^{1} * \cdots * PR_{t-1.ii}^{t}$$

Regional CPI is calculated:

$$RIÇKI_{i,0}^{t} = \sum_{i} r_{ij} * PR_{0,ij}^{t}$$

The price relatives are aggregated geographically to form product indices on items for whole Albania:

$$I_{0,i}^t = \sum_j r_{ij} * PR_{0,ij}^t$$
 Where:  $\sum_j r_{ij} = 1$  :  $\forall_i$  (for all cases)

Aggregation over items then gives the CPI of Albania:

$$CPI_0^t = \sum_{i} w_{i.} * I_{0,i}^t$$
 Where:  $\sum_{i} w_{i.} = 1$

The annual rate measures the price change between the current month and the same month of the previous year. This measure is responsive to recent changes in price levels but can be influenced by one-off effect in either month

The monthly rate measures the price change between current month and previous month. Although upto-date it can be affected by seasonal and other effects.

The 12-month average rate compares average Consumer Price Indices and the latest 12 month to the average of the previous 12 months.
