

# Balance of electric power

## Quarter II - 2023

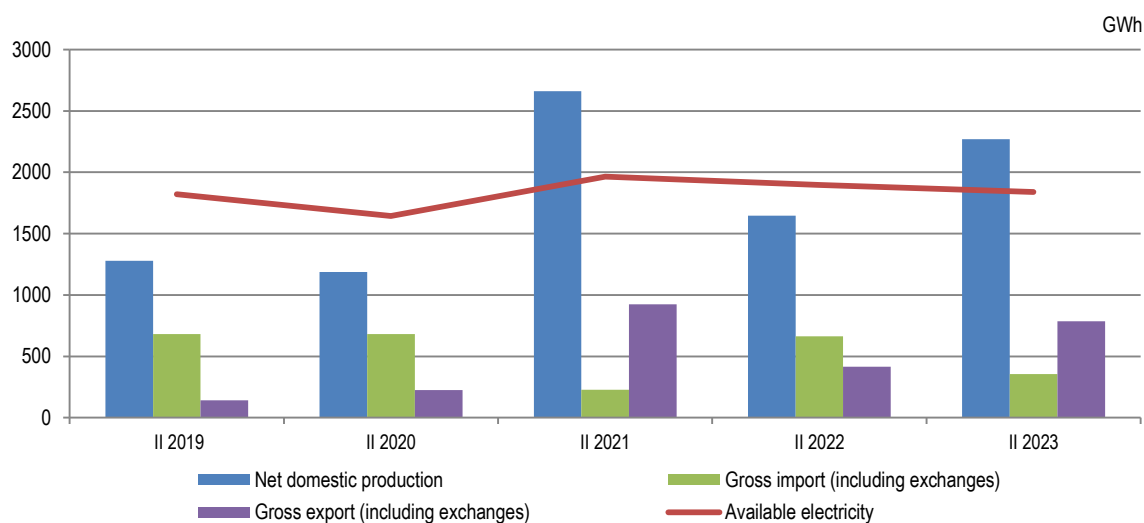

**Tirana, August 24, 2023:** During the second quarter of 2023, available electricity decreased by 3.0 %.

**Net domestic production** of electric power in this period increased by 37.8 %, reaching the value 2,269 GWh from 1,647 GWh of electricity produced in the second quarter of 2022.

This production was realized by public hydro plants at 52.3 % of net domestic production, by independent power producers to the extent 46.5 % and other producers (Photovoltaics) that generated 1.2 % of net domestic electricity production.

Gross import of electric power (including exchanges), in the second quarter of 2023, reached the value 355 GWh from 664 GWh, compared to the same period of the previous year, marking a decrease by 46.5 %. Gross export (including exchanges) reached the value 786 GWh from 415 GWh marking an increase with 89.4 % (tab.1).

MWh

Indicators		Q.II 2022	Q.II 2023
<b>A</b>	<b>Available electricity (A=1+2-3)</b>	<b>1,895,695</b>	<b>1,838,290</b>
1	Net domestic production (1=1.1+1.2+1.3)	1,646,982	2,268,936
1.1	Thermo	0	0
1.2	Hydro (1.2=a+b)	1,633,353	2,242,775
a	Net public producers (a=a.1-a.2)	631,006	1,186,204
a.1	Gross public producers	637,449	1,196,126
a.2	Losses and own consumption	6,443	9,921
b	Independent power producers	1,002,347	1,056,571
1.3	Other producers (Photovoltaics)	13,629	26,161
2	Gross import (including exchanges)	663,815	355,441
3	Gross export (including exchanges)	415,102	786,087
<b>B</b>	<b>Consumption of electricity (B=1+2)</b>	<b>1,895,695</b>	<b>1,838,290</b>
1	Electrical losses (1=1.1+1.2)	362,521	358,806
1.1	Losses in transmission	55,673	57,211
1.2	Losses in distribution (1.2=a+b) <sup>1</sup>	306,848	301,595
a	Technical losses in distribution	208,619	208,997
b	Non technical losses in distribution <sup>2</sup>	98,229	92,598
2	Consumption of electricity by domestic users (2=2.1+2.2)	1,533,174	1,479,483
2.1	Households	685,610	693,614
2.2	Non households	847,564	785,870

<sup>1</sup> Breakdown of technical and non-technical losses is an estimation made by operators in the field of electricity.

<sup>2</sup> Non-technical losses refer to the difference between total losses in distribution and technical losses in distribution and are added also statistical differences which derive from the differences in the period of measurement in production, consumption and trade of electricity.

**Public hydro plants**, in the second quarter of 2023, realized 1,186 GWh from 631 GWh realized in the second quarter of 2022, thus marking a increase in production by 88.0 %. While, **independent and concessionaire power producers** realized 1,057 GWh from 1,002 GWh realized to the same period of the previous year, thus marking a increase in production by 5.4 %.

**Electricity exchange (difference between gross exports and gross imports of electricity)**, in the second quarter of 2023 has reached a positive value by 431 GWh, compared to the same period of the previous year where it had a negative value of 249 GWh.

**Fig. 2 Electricity exchange**

**Electrical losses** have reached value 359 GWh from 363 GWh marking a decrease by 1.0 %. **Losses in transmission** increased by 2.8 %, while **losses in distribution** decreased by 1.7 %.

**Technical losses in distribution** resulted on an increase with 0.2 %, while **non-technical losses in distribution** resulted on a decrease with 5.7 %, compared with the second quarter of 2022 (fig.3).

**Fig. 3 Consumption of electricity, electrical losses and consumption of electricity by domestic users**

**The consumption of electricity by domestic users**, in the second quarter of 2023, decreased by 3.5 %, reaching 1,479 GWh from 1,533 GWh realized in the second quarter of 2022.

The impact on the decrease of the final consumption of electricity by domestic users was provided by **consumption of electricity by non-households** with an decrease of electricity consumption by 7.3 %, while the energy consumed by household consumers increased by 1.2 % of **(fig. 4)**.

**Fig. 4 Consumption of electricity by domestic users**

# Methodology

Balance of electric power provides statistical information on domestic production of electricity, electricity exchange, losses in network also the usage of electricity for final consumption in our country. The publication of electric power balance is quarterly, based on monthly data collected from administrative sources as:

- KESH a.s., a state joint stock trading company, vertically integrated, which has the leading role and is the key producer of electricity in Albania;
- OSSH a.s., a public company with 100% state-owned shares that carries out the supply and sales of electricity also the operation and management of the distribution network;
- OST a.s., transmission system operator is a public company with 100% state-owned shares that operates in the electricity transmission system from the physical and distribution concepts. OST a.s. provides the necessary transmission capacities for:
  - the supply of uninterrupted electricity for Distribution System substations and electricity customers directly connected to the transmission network;
  - the transmission of electricity produced from domestic sources;
  - also transits and necessary exchanges with other countries in the region.

## Definitions of basic indicators

**Available electricity** refers to the quantity of electricity generated by domestic production of electricity plus total amount of electricity exchange.

**Net domestic production** of electricity is equal to the gross electricity production from thermo plants, hydroelectric plants and other producers less the electrical energy absorbed by the generating auxiliaries and the losses in the main generator transformers.

**Thermo electricity** refers to electricity produced by thermo plants.

**Hydro electricity** refers to energy of water converted into electricity in hydroelectric plants.

**Losses and own consumption** is the total plant's consumption in generation process and production losses.

**Independent power producers** refer to private electricity producers which consist of private plants and concession contracts with the Republic of Albania. These producers are directly related to the transmission system and are licensed by the Energy Regulatory Entity (ERE) and may sell capacity or energy to OST and OSSH, to cover losses in transmission and distribution system, as well as to other clients.

**Other producers** refer to electricity production from other energy sources, excluding hydro and thermo electricity.

**Electricity exchange** refers to the difference between imported and exported electricity, also including transits and necessary exchanges of electricity with other countries in the region.

**Consumption of electricity** refers to the total quantity of electricity consumed by final users and losses in networks. It is equal to the sum of the following categories: electrical losses and consumption of electricity by domestic users.

**Electrical losses** refer to losses in transmission network including own consumption in transmission and distribution losses. *Technical losses* in distribution are estimated by OSSH a.s. *Non technical losses* refer to the difference between total losses in distribution and technical losses in distribution and are added also statistical differences which derive from the differences in the period of measurement in production, consumption and trade of electricity.

**Consumption of electricity by domestic users** refers to the quantity of electricity consumed by final users and is calculated as the sum of the consumption of households and non households.

**Households** refer to the quantity of household's electricity consumption.

**Non households** refer to the electricity consumption quantity that are not consumed by households but include the consumption of electricity by industry, transport, agriculture, public services, etc.
