## Methodology

The Construction Cost Index (for Dwellings) (CCI) measures the price development of the production factors raw materials, labour, machinery, transports, energy and other costs that are used in building projects. The CCI is an important economic indicator for the construction sector. The main users of Construction Cost Index are the National Accounts as a deflator, Ministries, the Bank of Albania, IMF, World Bank and for analysing the construction sector. The CCI from first quarter 2011 is calculated with a new basket of materials and expenditures. The new weights are calculated based on the projections for multi-dwelling buildings taken by firms. The first quarter 2011 is the base period for calculating the index (First quarter 2011=100). The new basket contains 73 items of which 68 are construction materials. The prices for construction materials collected from 138 distributors and retailers of construction materials. The data for salaries, machineries and transport collected in 50 biggest construction companies concentrated mostly in Tirana. The selection of companies is based on the volume of construction companies realized over a period of one year. The expenditure classification is based on classification of EUROSTAT for Construction Cost Index. The new CCI have six expenditure groups:

- Material Expenditures
- Salary Expenditures
- Machinery Expenditures
- Transport Expenditures
- Energy Expenditures
- Other costs

For calculation of Construction Cost Index we use the Laspeyres index model:

$$I_{0t}^{L} = \frac{\sum_{i=1}^{n} \left( \frac{p_{t}^{i}}{p_{0}^{i}} \times w_{0}^{i} \right)}{\sum_{i=1}^{n} w_{0}^{i}} \times 100$$

Where:

Page 5

 $I_{ot}$  = Index number at a point in time t

 $p_t^i$  = Price per unit at point in time t (current period)

 $p_0^i$  = Price per unit at point in time 0 (base period)

 $w_0^i$  = Weight of product *i* at the base period

### Revision

Indexes may be revised due to several reasons: additional information, the methodological changes, change of base period, etc.

#### Measure of index

The annual rate measures the price change between current quarter and the same quarter of the previous year.

The quarterly change measures the price between current quarter and previous quarter.
