

Construction Cost Index for Dwellings

Second quarter, 2017

Tirana, on September 4, 2017: In the second quarter 2017, Construction Cost Index for Dwellings reached 103.0 versus the first quarter 2011 (First quarter 2011=100).

In the second quarter 2017, the annual change of construction cost index is 0.8 %, and the quarterly change is 0.1 %.

Fig. 1 Annual changes of Construction Cost Index for Dwellings

The annual change of construction cost index is 0.8 %. In the same period of year 2016, this change was -0.2 %. Compare with second quarter of 2016, “material expenditures” group is increased by 1.6 % followed by “salary expenditures” group with 2.5 %.

In comparison with second quarter of previews year, index groups of “transport expenditures” and “machinery expenditures” are decreased respectively by 1.5 % and 0.2 %.

In the second quarter 2017, the quarterly change of the CCI for dwellings is 0.1 %. In comparison with first quarter of 2017, the index group of “salary expenditures” is increased by 1.1 %, “material expenditures” by 1.0%.

In comparison with previews quarter, the index group of “transport expenditures” and “energy expenditures” has not changed.

Methodology

The Construction Cost Index for Dwellings (CCI) measures the price development of the production factors raw materials, labour, machinery, transports, energy and other costs that are used in building projects. The CCI is an important economic indicator for the construction sector. The main users of Construction Cost Index are the National Accounts as a deflator, Ministries, Bank of Albania, IMF, World Bank and for analysing the construction sector. The CCI from first quarter 2011 is calculated with a new basket of materials and expenditures. The new weights are calculated based on the projections for multi-dwelling buildings taken by firms. The first quarter 2011 is the base period for calculating the index (First quarter 2011=100). The new basket contains 71 items of which 66 are construction materials. The prices for construction materials collected from 165 distributors and retailers of construction materials. The data for salaries, machineries and transport collected in 65 biggest construction companies concentrated mostly in Tirana. The selection of companies is based on the volume of construction companies realized over a period of one year. The expenditure classification is based on classification of EUROSTAT for Construction Cost Index. The new CCI have six expenditure groups:

- Material Expenditures
- Salary Expenditures
- Machinery Expenditures
- Transport Expenditures
- Energy Expenditures
- Other expenditures

Revision

Indexes may be revised due to several reasons: additional information, the methodological changes, change of base period. etc.

Measure of index

The annual rate measures the price change between current quarter and the same quarter of the previous year.

The quarterly change measures the price between current quarter and previous quarter.
