3. Statistical presentation	
3.1. Data description	The turnover index is a quarterly short-term indicator used for the business cycle analysis. The main source for Turnover index in Services is the Quarterly Survey of Short-Term Statistics, Questionnaire on Services (Module 126, 127, 128, 129, 1231, 1232).
3.2. Classification system	Statistical classification of economic activities NACE Rev. 2 .
3.3. Sector coverage	The survey (for this indicator) covers enterprises classified in sections G to N of NACE Rev.2. G - Wholesale and retail trade; repair of motor vehicles and motorcycles

	<p>covers economic activities listed in code 45</p> <p>G - Wholesale covers economic activities listed in code 46</p> <p>H - Transport and storage covers economic activities listed in codes 49 to 53</p> <ul style="list-style-type: none"> • Railway transport covers economic activities listed in code 49 • Maritime transport covers economic activities listed in code 50 • Air transport covers economic activities listed in code 51 • Warehousing and support activities for transportation covers economic activities listed in code 52 • Postal and courier activities covers economic activities listed in code 53 <p>I - Hotel covers economic activities listed in code 55.00</p> <p>J - Information and communication covers economic activities listed in codes 58, 61, 62</p> <ul style="list-style-type: none"> • Publishing activities covers economic activities listed in code 58 • Telecommunications covers economic activities listed in code 61 • Computer programming, consultancy and related activities covers economic activities listed in code 62 <p>M - Architectural and engineering activities covers economic activities listed in code 71</p> <p>N - Travel agency covers economic activities listed in code 79.</p> <p>The survey covers all large and medium-sized enterprises as well as a representative number of small enterprises. A stratum is determined according to classes and is based on number of employed.</p>
<p>3.4. Statistical concepts and definitions</p>	<p>The objective of the turnover index is to show the development of the market for goods and services. Turnover comprises the totals invoiced by the observation unit during the reference period, and this corresponds to market sales of goods or services supplied to third parties. Turnover also includes all other charges (transport, packaging, etc.) passed on to the customer, even if these charges are listed separately in the invoice. Turnover excludes VAT and other similar deductible taxes directly linked to turnover as well as all duties and taxes on the goods or services invoiced by the unit. The indices of domestic and export turnover require turnover to be split according to the first destination of the product based on the change of ownership. The destination is determined by the residency of the third party that purchased the goods and services. The indices of domestic and export turnover are collected but not published.</p>
<p>3.5. Statistical unit</p>	<p>The observation unit is the Enterprise.</p>
<p>3.6. Statistical population</p>	<p>Statistical population includes statistical units, in this case enterprises, which operate in economic activities according to NACE Rev. 2, Industry (sections B, C, D and E, respectively divisions 05-39); Construction (section F, divisions 41-43); Trade (section G, divisions 45-47); Services (section H, divisions 49-53, section I, division 55.1, section</p>

	J, divisions 58-63, section M, division 71, section N, division 79). The enterprises with 1-9 employed are surveyed by sample survey, whereas the enterprises with 10 and more employed are surveyed exhaustively.
3.7. Reference area	Turnover Index in Services covers the whole territory of Albania.
3.8. Time coverage	Quarterly Short-term Statistics Survey referred to Turnover Index in Services date from 2005 onwards.
3.9. Base period	The base year is 2010.
4. Unit of measure	Measurement unit are Indices, percentage changes (%).
5. Reference period	The information collected refers to quarterly periods. This report is based on reference year 2018.
6. Institutional mandate	
6.1. Legal acts and other agreements	<p>The legal basis on which STS indicators are based consist on:</p> <ul style="list-style-type: none"> • National Statistical Law • Official Statistics National Program 2017-2021 <p>Classifications and definitions according to relevant EU regulations:</p> <ul style="list-style-type: none"> • Council Regulation No.1165/98 introducing short-term statistics at European level • Commission Regulation No.1503/2006 defining variables and frequency of data compilation, repealing new orders received for building construction and new orders received for civil engineering.
6.2. Data sharing	STS data exchange has started in the third quarter of 2017 at the European level. Since first quarter of 2018 the data for Turnover Index in Services are transmitted regularly to EUROSTAT.
7. Confidentiality	
7.1. Confidentiality - policy	Data are considered strictly confidential and are used only for statistical and research purposes based on national Statistical Law No.17/2018 “On Official Statistics”, date 10.03.2018 and on Law No.9887, date 10.03.2008 “Personal Data Protection”. Article 31 on Statistics Law reads as follows: Data collected for the production of official statistics shall be treated by INSTAT as confidential and shall be used only in aggregated tables that will not identify the source information unit. Direct identification means when a statistical unit is directly identified

	<p>from its name or address or any officially allocated and commonly known identification number. When data processing is made in a manner that allows the identification of the data subject, the data should immediately be encrypted in order for the subjects to be no longer identifiable</p>
<p>7.2. Confidentiality - data treatment</p>	<p>Albanian Institute of Statistics protects and does not disseminate data it has obtained or it has access to, which enable the direct or indirect identification of the statistical units. Albania Institute of Statistics takes all appropriate preventive measures so as to render impossible the identification of individual statistical units by technical or other means that might reasonably be used by a third party. Statistical data that could potentially enable the identification of the statistical unit are disseminated by Albania Institute of Statistics if and only if:</p> <p>a) these data have been treated, as it is specifically set out in the Regulation, in such a way that their dissemination does not prejudice statistical confidentiality or</p> <p>b) the statistical unit has given its consent, without any reservations, for the disclosure of data.</p> <p>The confidential data that are transmitted to Albania Institute of Statistics are used exclusively for statistical purposes and the only persons who have the right to have access to these data are the personnel engaged in this task. Issues referring to the observance of statistical confidentiality are examined by the staff working in Albania Institute of Statistics. The responsibilities of this staff are to recommend on: which detailed level the statistical data can be disseminated, so as the identification, either directly or indirectly, of the surveyed statistical unit is not possible; the anonymization criteria for the microdata provided to users; the access granting to researchers on confidential data for scientific purposes.</p>
<p>8. Release policy</p>	
<p>8.1. Release calendar</p>	<p>Notifications about the dissemination of statistics are published in the release calendar, which is available on the website. The announcements and delays are per-announced in this calendar. In the case of delays, the date of the next publication and the explanation of the reasons for the delays are specified.</p>
<p>8.2. Release calendar access</p>	<p>The calendar of publications is available on INSTAT website.</p>
<p>8.3. User access</p>	<p>In line with the article 34 of Law No.17/2018 “On Official Statistics”, dated in 17.04.2018, disseminates statistics on INSTSAT website and other media for simultaneous access, respecting professional independence and in an objective, professional and transparent manner in</p>

	<p>which all users are treated equitably. The following dissemination channels are used to release the results:</p> <ul style="list-style-type: none"> • Website – online release • Written requests • Special publications • Data request, section available for external users
9. Frequency of dissemination	The Turnover Index in Services is disseminated on quarterly basis.
10. Accessibility and clarity	
10.1. News release	According to the calendar of publications, press release regarding to Short-term statistics is published quarterly. The format of press release has not been changed; it is defined by publication sector as well as the date of release. Press releases of STS are published online at INSTAT's website.
10.2. Publications	Press release is published in INSTAT's website, under sub-theme: Short Term Statistics .
10.3. On-line database	All the information is available in both Albanian and English language. Since 2011, the information is provided to external users in web through the Pc-Axis system. A short methodological explanation exists also in the web page. You can access the database on the section Database .
10.4. Micro – data access	Databases at micro level are not published due to confidentiality reasons. Aggregated data is the only type of data that is provided to external users. Even though the micro data are not published they can be accessed based on the article 31, point 7 of the law No. 17/2018, dated 17.04.2018 "On official statistics".
10.5. Other	Users can send other specific requests through a dedicated section for Contacts .
10.6. Documentation on methodology	A short explanation related to the definitions of the main concepts and methodological explanations are provided to users in the end of press releases and publications. Additional support information is given to internal users when needed or required. Also the Methodological notes are published at INSTAT's website.
10.7. Quality documentation	The short term statistics unit document all the STS work processes and procedures only for internal purposes.

11. Quality management	
11.1. Quality assurance	<p>INSTAT is committed to ensure the highest quality with respect to the compilation of statistical information. In accordance with the Statistics Law, INSTAT use statistical methods and processes in compliance with internationally recognized scientific principles and standards conduct ongoing analyses of the statistics with a view to quality improvements and ensure that statistics are as up to-date. In performing its tasks it follows the general principles of quality management from the European Statistics Code of Practice. INSTAT declares that it takes into account the following principles: impartiality, quality of processes and products, user orientation, employee orientation, effectiveness of statistical processes, reducing the workload for respondents. Quality controls and validation of data are actions carried out throughout the process. The staffs is involved in different stages of index calculation, such as the data collection, data control, data input and other necessary control are all well trained. This helps the staff to know the enterprises and their responsibilities and keep an updated collaboration.</p>
11.2. Quality assessments	<p>A comparison is made with data's of previous year to see if there is any data coherence or if there were major changes. In case of changes, administrative data is used to confirm the situation of cases where large differences of behavior of one year with other years are encountered.</p>
12. Relevance	
12.1. User needs	<p>Users are classified as external and internal.</p> <p>External users are:</p> <ul style="list-style-type: none"> • Ministries and public administrations that use these data for economic and social policy planning purposes. • Universities (professors/graduated and post graduate students), research organizations. • National and international NGO's. • Enterprises • General public which gets the information via mass media through publications made by Statistical Office. <p>Internal users are those within the institution of INSTAT:</p> <ul style="list-style-type: none"> • National Account Directory • Statistical Business Register • Employment and wages Sector
12.2. User satisfaction	<p>Page Views (Hits) in 2018 for Short-Term Statistics (Turnover Index in Services) were about 6,151 clicks. INSTAT during 2018 conducted User Satisfaction Survey. Users to the questions: "How do you rate the overall quality of Short-Term Statistics?" using a scale from 1 to 5 (1=very poor,</p>

	<p>2=poor, 3=adequate, 4=good, 5=very good), have assessed the quality of the data with an average of 3.55 (71%). Here you may find the results of User Satisfaction Survey, 2018.</p>
<p>12.3. Completeness</p>	<p>Short-term statistics on their completeness are built in accordance with Eurostat regulations. The degree of completeness of the data, for the survey of STS 2018 is 70.6%. This calculation took into account the European regulation. As a result the compilation of Turnover Index in Services and the data provided are in line with the relevant EU Regulations.</p>
<p>13. Accuracy and reliability</p>	
<p>13.1. Overall accuracy</p>	<p>Overall, the data are checked with previous years and previous quarter to identify any significant changes. Such queries are confirmed with financial statements or with an administrative source when available.</p> <p>The sampled population of STS 2018 includes approximately 9,000 enterprises that are surveyed each quarter. Sampling design is stratified simple random sampling. Criteria used for stratification is the number of employees according to the NACE Rev. 2 3-digit level.</p> <p>Calculating the estimates of statistical data and analysis evaluating outliers are done regularly. The overall accuracy rate is high, considering the high response rate. To calculate the estimates, Horvitz-Thompson estimator is used, that is unbiased. The accuracy of the estimates is reached by eliminating sampling errors and non-sampling errors, such as coverage, non-response, response mistakes and processing errors.</p> <p>Coverage errors reasons are: misclassification of units and changes in state of reporting units. In case of non-response, units are contacted by telephone and email. The sampling error in percent (CV) is calculated for main indicators of survey that are published every quarter.</p>
<p>13.2. Sampling error</p>	<p>Sampling error is treated in the internal technical reports, where, for main indicators in survey we calculate the total variance and relative standard errors, to eliminate the negative effect of NACE activity changed in STS time series. All indicator values are weighted to represent the population Relative standard deviation in average for the variable Turnover is around 3.57%.</p>
<p>13.3. Non - sampling error</p>	<p>Unit non-response takes in consideration enterprises that are unable or unwilling to give the answers or when interviewers are unable to find the enterprises address, or when other barriers exist to complete the interview. The unit non-response rate of STS 2018 is 5.08%.</p>

14. Timeliness and punctuality

14.1. Timeliness

Results of Turnover Index in Services are published on INSTAT website 74 days after the end of the reference period (T+ 74 days). The reference period of these results is December 31st, 2018.

Reference period	12/31/2018
Date of publication	03/15/2019
Timeliness	74

14.2. Punctuality

The data of Turnover Index in Services, are disseminated according to the publication calendar. The publication of Turnover Index in Industry has been punctuality in time to 100% of publications carried out over the years.

Reference period	12/31/2018
Date of announcement	03/15/2019
Date of publication	03/15/2019
Time lag	0

15. Coherence and comparability

15.1. Comparability - geographical

The data related to Turnover Index in Services are prepared in accordance with Eurostat methodology and are comparable at international level. These data are comprehensive and produced at the country level.

15.2. Comparability - over time

Over the years Turnover Index in Services has undergone changes in coverage and in the method of selection. Quarterly Survey of Enterprises has started for the first time in 2005. Enterprises with 1-9 employed are sampled with selection, while enterprises with over than 10 employed are taken exhaustively, without changing the scope of coverage. In 2012, the population of Turnover Index in Services is changed as a result of updating the Register of Enterprises with the results of the Economic Enterprises Census 2010. All changes are back casted and reported in the methodological explanations of publications. In 2014 in Turnover Index in Services it was implemented the nomenclature of economic activities, NACE Rev. 2, the weights structure it is updated, and changing the base period of the indices from 2005 to 2010. All these changes in the indices series are not disconnected, but the indices are back casted. These changes are reported in the methodological explanations that go together with respective publications.

15.3. Coherence - cross domain

Data are cross checked against administrative sources on quarterly basis. After these checks, it can be concluded that the data is coherent.

15.4. Coherence - internal	The internal consistency of the data is checked before it is finalized. The links between variables are checked and coherence between different data series confirmed. Short term statistic specialists work together with relevant departments to ensure consistency and coherence of statistical indicators.
16. Cost and burden	<p>STS cost includes information on the permanent and temporary number of the staff. STS number of staff are as following: Total 249 employees</p> <ul style="list-style-type: none"> • Total staff in Central Office 7 employees • Logistics specialists 2 employees • Enumerators (four months) 220 employees • Controllers (four months) 10 employees • Operators (four months) 10 employees <p>Enumerators hired four times a year for the following surveys:</p> <ol style="list-style-type: none"> 1. Quarterly Survey of Enterprise; 2. Producer Price Survey; 3. Import Price Survey; 4. Construction Cost Survey. <p>Missing information for unit non-response is completed with administrative data transmitted to INSTAT without cost, based on Memorandum of Cooperation between INSTAT, DPT and QKR. Other sources are considered BR, previous STS, etc. STS staff manages the control and analysis of data, so these two processes have no additional cost.</p>
17. Data revision	
17.1. Data revision - policy	<p>Revision policy is done in accordance with general revision policy and errors treatment policy introduced by INSTAT in the links below:</p> <ul style="list-style-type: none"> • Revision Policy • Errors Treatment Policy
17.2. Data revision - practice	<p>Published data are not considered final; they may be revised. Data are revised in the whole range or for other reasons such as: Implementation of the new NACE classification, methodological changes, new information or data improvements and error correction. But the revisions are generally rather limited in scale. Revision of the previous quarter is possible during each quarter and adjustments can be made at the end of each year for the four quarters.</p>
18. Statistical processing	

18.1. Source data	<p>Data are based on quarterly statistical surveys. The basis of selection is the Register of active enterprises for the reference year. Classification of enterprises is done according to the Nomenclature of Economic Activities, NACE Rev. 2. Frame population is determined by two basic criteria: Size of enterprise (based on number of employed) and economic activity in scope, with cut-off. The method of selection used is Stratified Simple Random Sampling (SRS). Stratification is based on a combination of economic activity with size group of the enterprise. Indicators are presented for economic activities according to the areas specified in the STS regulation and also based on user needs.</p>
18.2. Frequency of data collection	Quarterly.
18.3. Data collection	<p>The data are collected directly by interviewing with paper questionnaire, quarterly basis, 15 days after the end of the reference period. Duration of this survey is 15 working days.</p>
18.4. Data validation	<p>Data received from survey and from VAT file (used for imputation) are validated using logical validation rules.</p> <p>At national level, editing involves studying data from respondents with the aim of identifying (and eventually correcting) errors. Not all errors can be identified and the aim is to detect the errors that have a significant influence on the results.</p> <p>Rules to assist in identifying errors may flag possible errors that require further investigation to determine where there really is an error as opposed to an unusual result or they may identify definite errors. Editing involves checks for completeness, that values are within given ranges and that values for related variables are coherent. Data editing may take place during or after data entry.</p> <p>Responses can be compared to the response of previous quarters. Inconsistency or large deviations (outside of a pre-established range) indicate that a closer look is desirable. This may result in data editing. In the context of timeliness, the editing process may be designed to give top priority to those outliers that are most in need of editing for the sake of reliable aggregates. By solving the worst cases, large improvements can be achieved.</p>
18.5. Data compilation	<p>National level</p> <p>First step is collecting information from the interviewers. The purpose is to bring this information to the statistic level. This process follows:</p> <ul style="list-style-type: none"> • Physical control of questionnaires (verification of completed questionnaires according to the scanning standards). • Logical control of questionnaires (control of logical marked of

	<p>responses indicators, description and codification of activity, and control of accurate values).</p> <ul style="list-style-type: none"> • Editing process of data collected (errors and modification) • Non response units and the missing information for very important enterprises (big units) are completed through the imputation process using information taken from other sources. • Comparability phase (collected survey data with the administrative sources, previous periods or trends). • Analysis of results for each domain of publication • Completed results are used for weight and re-weight phase • The aggregated data are compared to other data sources • The last two phases can be subject to other analysis used for publication domain. <p>When statistical analysis is finished, these data are determined as a group of non-public information. Before releasing the results, very important matter is the confidentiality of this information.</p>
<p>18.6. Adjustment</p>	<p>Turnover Index in Services is calculated both seasonally adjusted and unadjusted.</p> <p>Seasonal adjustment of quarterly time series of the STS is done by using JDemetra+ 2.1 version software. The chosen model for the decomposition of time series is X-12 ARIMA, under specification X13, the span of time series is from First Quarter 2005 to Fourth Quarter 2018. X-12 ARIMA model is totally based in moving average. In all-time series is applied the multiplicative decomposition and the direct approach. During the process of seasonal adjustment are treated even the special case occurred during the time series span, identified by software as outlier.</p>
<p>19. Comment</p>	
<p>Annex</p>
