Methodology

Purpose - The short-term statistics shows the trend of economic development of a country in quarterly periods. By which the policy makers can develop a short term plan for the further development of the country. The development of the main indicators such as; industrial production, turnover, number of employees and wages in time series are described by this publication.

Coverage - based on main economic activity the main activities covered in the STS survey for services is as following:

- Total sale and repair of motor vehicles (45) and Wholesale (46)
- Transportation and Storage (is included and the Postal and courier activities) (49-53)
- Accommodation and Food Services: Hotels (55.1) and Bar-Restaurants (56)
- Information and Communication (58, 60, 61, 62)
- Real estate activity (68)
- Legal and Accounting activities (69)
- Architectural and Engineering activities (71)
- Administrative Services and ancillary activities – Travel Agencies (79)
- Security and investigation activities (80)
- Office administrative, office support (82)

Model and data collection - The enterprises are selected from the Statistical Register of Enterprises. The enterprises with 1-9 employees are surveyed by sample survey, whereas the enterprises with 10 and more employees are surveyed exhaustively. Administrative data sources and data collected directly from enterprises with face to face interview method are used this quarter.

Indicators - The indicators are given in Index form. The quarterly changes are given in percentage; whereas the annual changes are given in percentage with reference to the base year actually 2021=100. The data do not present absolute values.

Indexes - The indexes show the changes in time of a given variable, or of a group of variables. The Index Volume is calculated through the Laspeyres Formula. In order to avoid the prices impact the indices are deflated with the proper price index by activities. Transport with implicit price index calculated etc.

The annual and quarterly changes in percentage - The annual change measures in percentage the change of economic indicators of the actual quarter compared with the same quarter of the previous year. The quarterly change in percentage it measures in percentage the change of economic indicators of the actual quarter against compared with the previous quarter of the same year.

Revision - Indexes may be revised due to several reasons: additional information, the methodological changes or re-evaluation of the used coefficients etc.

Definition of the main indicators

Turnover is the total amount realized by enterprises during the month from the selling of goods. Selling of own products and services excluded VAT.

Number of persons working includes all persons who actually work in the observed unit. There are included owners and co-owners and family members that helps in the activity and employees in the end of the quarter.

Employment index - shows the evolution of employment in observation unit.

Wages and salaries - are defined as the total remunerations. In cash or in kind payable to all persons counted on the payrolls in return for work done during the accounting period.

Index of wages and salaries - the gross wages and salaries index approximates the development of the wages and salaries bill.

Seasonal adjustment

Seasonal adjustment of quarterly time series of producer of materials goods is done by using JDemetra+ 2.2.4 version software. The chosen model for the decomposition of time series is X-12 ARIMA, under specification X-13. The span of time series is from first quarter 2006 to second quarter 2025. X-12 ARIMA model is totally based in moving average.
