

HARMONISED INDEX OF CONSUMER PRICE

August 2026

Inflation measured by the Harmonised Index of Consumer Prices (HICP) in August 2026 was 3.0 %.

The main contribution to the annual increase in consumer prices in August came from the "Food and non-alcoholic beverages" group, which contributed +0.74 percentage points to the annual inflation rate, with an annual price increase of 2.1 %, followed by "Transport" contributing +0.59 percentage points with an annual increase of 7.0 %, "Recreation, sport and culture" contributing +0.55 percentage points with an annual increase of 8.5 %, "Restaurants and accommodation services" contributing +0.51 percentage points with an annual increase of 3.5 %, "Alcoholic beverages and tobacco" contributing +0.19 percentage points with an annual increase of 3.6 %, "Education services" contributing +0.15 percentage points with an annual increase of 3.3 %, "Health" contributing +0.11 percentage points with an annual increase of 2.1 %, etc.

In August 2026 consumer prices decreased by 0.1 % compared with the previous month. The monthly decrease was mainly influenced by the decline in prices of the group "Food and non-alcoholic beverages" and "Clothing and footwear" by 0.9 % each, followed by "Alcoholic beverages and tobacco" with 0.4 %, "Furnishings, household equipment and routine household maintenance" with 0.2 %. On the other hand, prices in the group "Transport" increased by 2.1 %, followed by "Restaurants and accommodation services" with 0.3 %, "Housing, water, electricity, gas and other fuels" and "Health" with 0.1 % each.

FIG. 1 ANNUAL CHANGE OF HICP BY COUNTRIES. AUGUST 2026¹

¹ INSTAT publishes unrounded indices, while EUROSTAT publishes indices rounded to two decimal places. This may lead to differences between them due to the different rounding methods used by each institution.

- Detailed data are available in INSTAT's statistical database: [Harmonised Index of Consumer Prices](#)
- In accordance with the Error Treatment Policy, INSTAT promptly corrects any errors identified in published official statistics. Users are informed immediately and transparently of the corrections and resulting changes, in line with the principles of impartiality, transparency and quality of official statistics. The full Error Treatment Policy is available at: <https://www.instat.gov.al/media/9577/politika-e-trajtimit-te-gabimeve.pdf>

Methodology

Starting with the release of data for August 2026, the complete HICP time series for the period 2016–2025, compiled according to COICOP 2018 (ECOICOP ver. 2), is made available. During the preparation of the time series, some products were reclassified at detailed levels. In accordance with Eurostat requirements, the all-items HICP remains unchanged for each month up to the second decimal place. Consequently, the historical all-items inflation rates remain unchanged.

Methodological changes

Starting from February 2026, the Consumer Price Index (CPI) is calculated according to the ECOICOP 2018 classification. The transition to the new classification includes the restructuring of basket items and the reclassification of certain products. The structure of ECOICOP ver. 2 consists of 13 main divisions, further detailed into groups, classes, and subclasses. The implementation of this classification is in line with Regulation (EU) 2024/3159, ensuring full harmonisation with European and international statistical practices.

The index reference period has been changed from December 2020 = 100 to 2025 = 100.

Additionally, in January, as every year, the Consumer Price Index is accompanied by some methodological changes in accordance with the international methodology for compiling this indicator, which consist of:

- Updating of weights: The weights of goods and services have been updated based on National Accounts data – Household Final Monetary Consumption Expenditure.
- Updating of the list of goods and services: The basket consists of 410 goods and services.
- Updating of the list of outlets where prices are collected.

Definitions

The Harmonised Index of Consumer Prices (HICP) measures the change in the level of retail prices of goods and services from the perspective of the expenditure structure of consumers (both domestic and foreign) for final consumption within the territory of Albania. The HICP is used to monitor price developments across European countries, enabling comparisons of inflation rates between countries and serving as the official measure of inflation for the European Central Bank, ensuring price stability within the Economic and Monetary Union.

The annual change measures the change in the price index between the current month and the same month of the previous year. This change reflects current price developments but August also be influenced by one-off effects in any given month.

The monthly change measures the change in the price index between the current month and the previous month. This indicator is sensitive to seasonal effects.

The 12-month average change measures the change in the average price index of the last 12 months compared with the average of the previous 12 months.

Comparison between CPI and HICP

The Consumer Price Index (CPI) and the Harmonised Index of Consumer Prices (HICP) are designed to measure changes in the average level of prices paid for the consumption of goods and services by all private and collective households, as well as by tourists in Albania. Both CPI and HICP are used as measures of consumer inflation.

Similarities between CPI and HICP

- **Purpose**
Both CPI and HICP measure changes in the average price level of a fixed basket of consumer goods and services.
- **Classification system**
Both indices use the same classification of goods and services – the European Classification of Individual Consumption by Purpose (ECOICOP Version 2).
- **Expenditure and data sources**
Only expenditures within the territory of Albania are included. The main sources of expenditure data (weights) are the Household Budget Survey and National Accounts – Household Final Monetary Consumption Expenditure.
- **Price data**
Both CPI and HICP are calculated based on prices collected from the same outlets, use the same product classification, and follow the same index compilation methodology.
- **Reference period (base)**
Both CPI and HICP are calculated using 2025 = 100 as the index reference period.
- **Methodology**
Both indices follow the methodology defined in European Commission Regulation (EC) No 2016/792 on HICP, developed by Eurostat in cooperation with the National Statistical Institutes of EU Member States.

Differences between CPI and HICP

- **Measure of consumer inflation**
 - CPI is the official measure of inflation in Albania.
 - HICP is used to monitor price developments across European countries and to compare inflation rates between them.

- Product coverage
 - CPI includes 411 items
 - HICP includes 410 items
- Coverage and source of expenditure data (weights)
 - CPI covers only the expenditures of Albanian private households, both inside and outside the country.
 - HICP covers all expenditures made within the country by all households, including private and collective households, as well as tourists in Albania.
- Weights
 - CPI weights are expressed per 100
 - HICP weights are expressed per 1000

COICOP	Divisions	Weights	
		CPI	IHICP
	Total	100	1000
01.	Food and non-alcoholic beverages	34.1	344.6
02.	Alcoholic beverages, tobacco and narcotics	5.0	51.9
03.	Clothing and footwear	3.8	36.9
04.	Housing, water, electricity, gas and other fuels	20.2	57.9
05.	Furnishings, household equipment and routine household maintenance	7.0	56.5
06.	Health	3.2	53.5
